

Cleanup Solutions for Heating/Cooling Systems & Gas Scrubbing Systems

Do you have issues with:

- Oil ingress from passing heat exchangers
- Carbon cracking at the exhaust heat recovery unit (EHRU)
- Corrosion debris in medium
- Solids erosion
- Solids deposition
- Foams and sludges
- Heat exchanger fouling
- Strainer blockage
- Particle damage to pumps

CETCO Oilfield Services is the solution!

We can save you tens of thousands of pounds:

- No required shutdown – works online
- No replacement of medium
- Eliminates disposal costs of contaminated media
- Integrated closed loop cleaning process
- Alternative to expensive capital upgrades
- Long-Term consumable savings
- Increased heat transfer efficiency
- Proven track record

Equipment Features:

- Simple system, no moving parts or electrical tie-ins
- Small footprint
- Tailored solutions for each application
- Temporary or permanent applications
- Minimal operator intervention

CrudeSorb® RFV 3000

Generic Heat Transfer System

CETCO Oilfield Services can tie-in to the main flow, taking a side stream through their unit to remove contaminants. This leaves the main system unaffected and operational whilst treatment takes place. By utilizing the differential pressure across the booster pumps, the need for additional feed pumps and power supply is negated. The temperature and pressure rating of the units are set above that of the main system. The CETCO units are simple, robust and fully rated for use in an offshore environment with the vessels incorporated within a DNV frame. CETCO Oilfield Services stocks a range of media types engineered fit for purpose and designed to provide maximum removal of contaminants with a reduced number of changeouts.
