COILED TUBING

CETCO
OILFIELD
SERVICES

Coiled Tubing Services & Capabilities

- Offshore and Land Units
- Well Cleanouts
- Traditional, Foamed, and Gelled Cleanouts
- Rotary Jetting
- Removal of Paraffin and Scales
- Acidizing
- Gravel Packing
- Memory Logging and Perforating
- Tool and Packer Deployment
- Pipeline Cleanouts/Decommissioning
- 15k Equipment
- Fluid Displacement
- N2 Displacement, Nitrogen Lifting
- Fishing, Milling & Under-Reaming Operations
- Matrix Acidizing
- Cement (zonal isolation), Cement Packers
- Velocity/Siphon Strings
- Well Control (circulating kill weight fluid)
- eelReel™ Service Package
—extended reach pipeline cleanouts

Service. Safety. Satisfaction.

Routine maintenance, remediation, setting tools, obtaining data, or specialty applications our coiled tubing division has the expertise and equipment to offer you the most comprehensive suite of coiled tubing services, equipment, and talent available in the industry.

Special Operations:

- Deepwater (Semi-Submersible, Spar, TLP)
- High Temperature / High Pressure
- Subsea Abandonment
- Pipeline Abandonment
- Special Needs (low crane limits/welding CT on location)

Equipment

CETCO Oilfield Services Coiled Tubing equipment is manufactured by Hydra-Rig, Stewart & Stevenson, Texas Oil Tools and VanOil. CETCO's coiled tubing units and support equipment utilize proven designs that enable our personnel to work with confidence knowing that they can count on our equipment when it is needed most. CETCO has the capabilities to handle the most challenging jobs – projects with two different motion compensation systems; high pressure projects up to 12,500 psi and greater – just to name a few.

Engineering Capabilities

- Cerberus Modeling Software – for modeling circulation, tubing forces, and job design
- Orion data acquisition – records tubing life and on-the-job parameters

Horizontal Logging

Nitrogen Lifting Fluids

Special Applications

Reduction of Hydrostatic Head for Production or Zone Evaluation

Permanent Installations for Gas Lifting, Siphon String or Chemical Injection

Back Flushing Disposal and Injection Wells

Thru-Tubing Gravel Pack

Spotting Resin-Coated Sand

COILED TUBING APPLICATIONS

eelReel Service Package: Maury™ tool for extended reach pipeline cleanouts

Solids Removal

Spotting Fluids and Cement

Downhole Tool Applications

Case Histories

Overcoming Obstacles

When faced with low crane limits for a customer who was told by others that his operation could not be done, CETCO Oilfield Services Coiled Tubing provided a solution. CETCO coordinated services from several different providers to enable a spooling and welding operations offshore enabling the operator to meet crane limits and complete the project successfully.

Pioneering

CETCO Oilfield Services Coiled Tubing is at the forefront of industry coiled tubing applications. CETCO was employed for a subsea abandonment project on hurricane damaged wells. The job was the first of its kind to utilize coiled tubing. Innovative solutions like these make CETCO's Coiled Tubing Division industry leaders.

COILED TUBING

Got A Pipeline Problem?

CETCO Oilfield Services exclusively offers the industry leading eelReel™ Service Package for extended reach pipeline cleanouts. Our eel Reel™ service package utilizes an industry breaking tool called the Maury™ tool that fits on the end of coiled tubing that “pulls” the coil through the horizontal segment of a pipeline which can then hook into a stuck pig and “push” it and the coiled tubing back out of the hole. CETCO has also completed technically challenging pipeline abandonment jobs as well as Deepwater ROV assisted tie backs for subsea pipeline cleanouts - jobs few other companies would even submit proposals for.
