# IMPLEMENTATION

## Typical Hi-Flow™ Equipment Layout

## Results from CETCO Oilfield Services Hi-Flow Process

# FAST & SIMPLE

## Hi-Flow Process Applications

- Permanent Produced Water Treatment and Polishing
- Diversion Skid
- System Upsets
- Increase Produced Water Handling Capacity

## Hi-Flow Process Solutions

- Handles small to large volumes of liquid, from 1,000 BWPD to more than 40,000 BWPD
- Features a small footprint
- Performs well with large fluctuations in oil and grease inlets
- Ensures discharge compliance
- Allows flexibility – can be used on projects with short or long durations

When produced water is a problem, CETCO Oilfield Services Hi-Flow Process can treat high rates of produced water, allowing the operator to return the produced water back into the environment in compliance with state and federal regulations.
