

WELL TESTING

OFFSHORE WELL TESTING

CETCO
OILFIELD
SERVICES

Offshore Well Testing Applications

- Well Intervention/Cleanup and Flow Backs
- Temporary Production Facilities
- Surface Sampling
- Fluid Transfer to Filtration System, Barge or Specialized Vessel
- Produced Fluid Maintenance
- HP/HT Capabilities
- Blowouts/Well Control
- On-Site Data Reports

Demanding standards. Proven leadership.

Highly trained, experienced personnel using proven technology are at the heart of CETCO Oilfield Services Well Testing Division. Unparalleled customer satisfaction is how we measure our performance.

CETCO Oilfield Services has been providing safe, reliable well testing and blowout flow control services to the oil and gas industry since 1968. We understand the business and the demands on our customers, and we customize our well test packages to meet the most challenging requirements safely and effectively.

Offshore or in deepwater; in wells with high pressure, high flow rates and solids; CETCO Oilfield Services has the experience, the innovative technology and the people to handle any challenge a well testing job presents.

We have successfully assembled the largest offshore well test package ever used in the Gulf of Mexico, and are one of the few companies in the world to offer integrated well testing and water treatment services.

We begin every job with pre-job planning. Flow diagrams or process and instrument diagrams (P&ID) identify safety devices and controls throughout the equipment, as well as potential problems. We eliminate hazards before we get to the wellsite, and our on-site supervisors and field service managers ensure that equipment and personnel meet our demanding performance standards.

OFFSHORE

Service. Safety. Satisfaction.

Safer for you. Safer for the environment.

Safety is a critical consideration on every job and for every employee. Our safety record speaks for itself: CETCO Oilfield Services Well Testing Division has an exemplary total recordable incident rate.

Every well testing employee completes an extensive safety training program before ever setting foot on a job site. Our comprehensive classroom and hands-on training sessions give our employees a thorough foundation in well testing and other areas including:

- T-2 production safety
- Hydrogen sulfide safety
- Firefighting
- Well control
- Basic core compliance safety (Safe Gulf)
- Rigger certifications in accordance with API RP 2D fifth addition
- Certificate of competence in an appropriate grade (specialist 1-5 or operator 1-5)

We hold our equipment to equally high safety standards. We have one of the largest fleet of offshore well testing equipment at work in the Gulf of Mexico, and it is designed to withstand hazardous and potentially lethal flow streams as well as high wellhead pressures and solids.

Only highly qualified and thoroughly trained personnel maintain and operate our equipment, and we keep detailed maintenance records for every piece of equipment we use. We are constantly expanding our fleet of well test equipment to meet our customers' needs for high pressure and high flow rate wells while meeting and exceeding industry and regulatory standards.

Because of our efficiencies in pre-job planning and our performance at the wellsite, our well testing clients see reduced project costs. Through our water treatment division, we minimize waste and associated disposal costs as well, thereby producing a cleaner environment.

Customer satisfaction is a key performance indicator for CETCO Oilfield Services Well Testing Division, and we try to exceed our customers' expectations on every job.
