

# CETcoag™ C-810

## technical specifications

### Description

CETcoag C-810 is a cationic coagulant that reacts readily to provide superior and performance in a variety of industrial waste substrates and applications. It has proven effective for the reduction of turbidity, color and similar contaminants from wastewater. The appropriate CETfloc flocculant or RM-10® used in conjunction with the CETcoag C-810 will further enhance liquid/solid separation and contaminant removal.

### TYPICAL PROPERTIES

Appearance	Light Blue Liquid	Specific Gravity	1.03-1.04
Ionic Character	Cationic	Active Content (%)	6.5-7.0
Molecular Weight	Low	pH	1.1-1.9
Approximate Bulk Density	8.60	Storage Temperature (°C)	0-30
		Shelf Life (months)	3

The information and data contained herein are believed to be accurate and reliable. CETCO OILFIELD SERVICES COMPANY makes no warranty of any kind and accepts no responsibility for the results obtained through application of this information. REV 7/08

### Application Instructions

CETcoag C-810 can be directly metered into the wastewater stream and mixed. A pin-floc should form when properly dosed.
